EDUCATION

Bowling Green State University

August 2022 - May 2026

Bachelor of Science in Computer Science, Computational Data Science Specialization

GPA: 3.93/4.0

- Graduated Summa Cum Laude (Top 5% Class)
- Relevant coursework: Data Structure & Algorithm, Operating Systems, Algorithm Design and Analysis, Parallel Computing, Machine Learning, Computing with Data, Database Management Systems, System Design

EXPERIENCE

Machine Learning Engineer Intern

January 2026 – May 2026

Magic Hour (YC W24)

Oakland, CA

- Improve multilingual video dubbing accuracy to 95% by optimizing LLM-based translation and lip-sync pipeline.
- Achieved a 97% hit rate across benchmark test cases by conducting systematic research on Seedance 2.0 multimodal AI video generation platform and identifying optimal workflows for reference image compatibility.

Software Engineer Intern

August 2025 – December 2025

Senecio Corp.

Bowling Green, OH

- Built Node.js/MongoDB APIs for geolocation-based event discovery, supporting real time queries for 50+ users.
- Reduced API latency by 35% by optimizing MongoDB geospatial queries and indexing for faster proximity search.

Data Analytics Intern

April 2024 – January 2026

BGSU Campus Operations

Bowling Green, OH

- Increased data processing throughput by 50% by building automated ETL pipelines in Python and SQL.
- Created Power BI dashboards for 5+ departments with role-based access control.

PROJECTS

AgentDa | *Crew.ai, Ollama, Canvas LMS, OpenAI*

February 2026

- Built a CrewAI-based multi-agent system that connects to Canvas LMS and retrieves upcoming assignments across enrolled courses.
- Automated assignment prioritization, deadline conflict detection, and personalized day-by-day study plan generation.

CryptoSense | *LangChain, OpenAI, Yfinance, Exa*

December 2025

- Built a multi-agent LLM system that parses natural-language crypto queries and routes tasks across specialized agents.
- Integrated LLM outputs with live market data to generate structured, automated analysis reports.

EcoCT (Hack Dearborn 4 Winner) | *Python, Fetch.ai, FastAPI, Open-Meteo API*

October 2025

- Developed autonomous AI agents with Python and Open-Meteo APIs to monitor climate metrics in real time, integrating with Agentverse for ecosystem interaction.

FalconGraph (BGSU Hackathon Winner) | *Python, C++, FastAPI, FAISS, OpenAI, Node.js*

August 2025

- Built an AI-powered semantic search system using RAG to answer natural language queries with source-grounded responses from indexed campus documents.

TECHNICAL SKILLS

Languages: Python, JavaScript, C/C++, SQL (PostgreSQL), R

Backend & Frameworks: Node.js, FastAPI, Flask, REST API, React

Cloud & DevOps: Docker, Google Cloud Platform, GitHub Actions, CI/CD

Data Engineering: Numpy, Pandas, PostgreSQL, MySQL, MongoDB, PowerBI

AI & ML: LLM, TensorFlow, scikit-learn, Hugging Face, RAG, LangChain, LangGraph, CrewAI, OpenAI API, Ollama

Developer Tools: Git/GitHub, Gitlab, VS Code, PyCharm, Antigravity, NotebookLM
